MODULE 1: Reading and Writing (27 Questions)

Directions:

The questions in this section address a number of important reading and writing skills. Each question includes one or more passages, which may include a table or graph. Read each passage and question carefully, and then choose the best answer to the question based on the passage(s).

All questions in this section are multiple-choice with four answer choices. Each question has a single best answer.

1. The scientific method is often idealized as a linear path from hypothesis to conclusion. In reality, the process is far more _____. Unexpected results frequently send researchers back to earlier stages, forcing them to reconsider their initial assumptions or redesign their experiments entirely.
   Which choice completes the text with the most logical and precise word or phrase?
   A. Predictable
   B. Circuitous
   C. Efficient
   D. theoretical
2. Early theories in economics often assumed that individuals always act with rational self-interest to maximize their financial gain. However, behavioral economists have demonstrated that human decision-making is frequently _____, influenced by cognitive biases, emotions, and social norms that defy purely logical calculation.
   Which choice completes the text with the most logical and precise word or phrase?
   A. erroneous
   B. calculating
   C. idiosyncratic
   D. altruistic
3. The construction of the transcontinental railroad in the 19th century was a monumental feat of engineering and labor. However, this achievement was profoundly _____, as it involved the widespread appropriation of Native American lands and relied heavily on the dangerous, underpaid work of thousands of immigrant laborers.
   Which choice completes the text with the most logical and precise word or phrase?
   A. Ambiguous
   B. Protracted
   C. Celebrated
   D. expedient
4. Nebulae, the vast clouds of gas and dust in interstellar space, are not merely static decorations in the cosmos. They are dynamic stellar nurseries where gravity pulls matter together until pressure and temperature are sufficient to ignite nuclear fusion, thereby _____ new stars.
   Which choice completes the text with the most logical and precise word or phrase?
   A. concealing
   B. orbiting
   C. illuminating
   D. generating

0 8 2 1 7 0 2 7 6 0 7 6

Dokumen ini bersifat RAHASIA DAN MILIK INTELEKTUAL LENTERAGO.
Segala bentuk reproduksi atau distribusi tanpa izin tertulis dapat ditindak sesuai hukum yang berlaku.

5. A catalyst is a substance that increases the rate of a chemical reaction without itself being consumed. It works by providing an alternative pathway for the reaction with a lower activation energy. The catalyst itself remains _____ at the end of the process, ready to facilitate another reaction.
   Which choice completes the text with the most logical and precise word or phrase?
   A. depleted
   B. unchanged
   C. inert
   D. volatile
6. Enzymes are highly specific protein catalysts within living organisms. Their unique three-dimensional shape allows them to bind only to certain reactant molecules, known as substrates. This specificity ensures that metabolic processes occur with remarkable _____, avoiding unintended side reactions.
   Which choice completes the text with the most logical and precise word or phrase?
   A. Frequency
   B. Efficiency
   C. Simplicity
   D. flexibility
7. The introduction of non-native invasive species to an ecosystem can have devastating consequences. Without the natural predators and diseases that kept their populations in check in their original habitats, these species can reproduce uncontrollably, outcompeting native organisms and _____ the local biodiversity.
   Which choice completes the text with the most logical and precise word or phrase?
   A. Bolstering
   B. Cataloging
   C. Diminishing
   D. stabilizing
8. The alarming rate of bee colony collapse disorder has prompted widespread concern among ecologists and agricultural experts. As primary pollinators, bees are indispensable for the reproduction of numerous fruit, vegetable, and nut crops. Their decline threatens not only global food production but also the stability of ecosystems that rely on pollination. Therefore, initiatives aimed at conserving bee populations are critical to mitigating these risks and safeguarding future food supplies.
   Which choice best states the main purpose of the text?
   A. To detail the specific causes of colony collapse disorder in bees
   B. To highlight the ecological and agricultural importance of bees and the need for conservation
   C. To compare the roles of different pollinators in agriculture
   D. To advocate for the adoption of alternative pollination methods
9. The invention of the printing press by Johannes Gutenberg in the 15th century is often credited with revolutionizing the dissemination of information in Europe. Prior to this innovation, books were laboriously copied by hand, making them rare and expensive. <u>The ability to produce books quickly and cheaply, however, facilitated the spread of literacy and ideas, contributing to events such as the Renaissance and the Reformation.</u> Consequently, the printing press is viewed as a key catalyst for cultural and intellectual transformation.
   Which choice best describes the function of the underlined sentence in the text as a whole?
   A. It identifies the technological limitations of previous book-making methods.

0 8 2 1 7 0 2 7 6 0 7 6

Dokumen ini bersifat RAHASIA DAN MILIK INTELEKTUAL LENTERAGO.
Segala bentuk reproduksi atau distribusi tanpa izin tertulis dapat ditindak sesuai hukum yang berlaku.

B. It elaborates on the consequences of Gutenberg's invention by providing specific outcomes.
C. It contrasts the effects of the printing press with those of other inventions.
D. It questions the significance attributed to the printing press.

10. Text 1
Conventional wisdom among marine scientists posits that coral bleaching is driven overwhelmingly by elevated sea temperatures. According to this perspective, when water becomes too warm, corals expel the algae living in their tissues, causing them to turn white.
Text 2
However, a 2023 study led by Dr. Lena Chen challenges this simplicity. Chen's team demonstrated that corals in areas with high nutrient pollution from agricultural runoff bleached at temperatures significantly lower than those considered critical in clean waters. The study concludes that local water quality conditions can profoundly influence the temperature threshold at which bleaching occurs.
Based on the texts, how would Chen and colleagues (Text 2) most likely respond to the "conventional wisdom" discussed in Text 1?
A. By affirming that temperature is the sole cause of bleaching, as the conventional wisdom suggests.
B. By arguing that the conventional wisdom fails to account for how pollution lowers the temperature tolerance of corals.
C. By claiming that nutrient pollution is more detrimental to corals than temperature stress.
D. By recommending that efforts to combat bleaching focus solely on reducing water temperatures.

11. The Huygens probe, which landed on Saturn's moon Titan in 2005, was designed with a protective heat shield to withstand the intense heat of atmospheric entry. While this shield was essential for surviving the descent through Titan's atmosphere, it would be insufficient for a landing on Venus. The surface pressure on Venus is over 90 times greater than Earth's, a force that would crush a craft like Huygens. Therefore, a lander built for Venus must be constructed with a massively reinforced structure to avoid being imploded by the immense atmospheric pressure.
According to the text, why would a probe like Huygens be unable to land on Venus?
A. Because the heat shield used on Huygens is ineffective in the atmosphere of Venus.
B. Because the surface pressure of Venus is too great for a craft of Huygens' design.
C. Because Venus lacks a substantial atmosphere necessary for a heat shield to function.
D. Because a lander on Venus would require a different type of heat shield than the one used on Huygens.

12. The Rosetta Stone, discovered in 1799, was instrumental in deciphering Egyptian hieroglyphs. This granodiorite stele contains a decree inscribed in three scripts: Ancient Egyptian hieroglyphs, Demotic, and Ancient Greek. Because the same text appears in all three languages, scholars could use the known Greek to decode the previously untranslatable hieroglyphs, unlocking a wealth of knowledge about ancient Egypt.
Which choice best states the main idea of the text?
A. The Rosetta Stone was discovered in 1799 and contains three different scripts.
B. The decipherment of hieroglyphs was achieved through the Rosetta Stone's multilingual inscription.
C. Ancient Egyptian culture became accessible to scholars after the discovery of the Rosetta Stone.
D. The Rosetta Stone is made of granodiorite and features a decree from ancient Egypt.

13. In the early 20th century, the artist Hannah Höch pioneered the photomontage technique, which involved assembling images from photographs and printed materials to create new artworks. As a member of the Berlin Dada movement, Höch used this method to critique contemporary society, particularly gender roles and political chaos. Her work demonstrated how photomontage could be a powerful tool for social commentary.
    Which choice best states the main idea of the text?
    A. Hannah Höch was a key figure in the Berlin Dada movement.
    B. Photomontage is an artistic technique that combines photographs and printed materials.
    C. Hannah Höch utilized photomontage as a means of social critique in her art.
    D. Early 20th-century art frequently engaged with social and political issues.
14. Researchers analyzed the adoption of electric vehicles (EVs) over the past decade. They hypothesized that advancements in battery technology, particularly the increase in driving range per charge, have been a significant factor in making EVs more appealing to consumers. The graph below shows the average battery range of EVs available in the market for the years 2010, 2015, and 2020. Based on the data, the researchers concluded that the consistent improvement in battery range has contributed to the growth in EV sales.

    Which choice best describes data from the graph that support the researchers' conclusion?
    A. The average battery range was highest in 2020, which corresponds to a period of high EV sales.
    B. The average battery range increased from 2010 to 2020, showing a steady improvement over time.
    C. The average battery range in 2015 was greater than in 2010 but less than in 2020.
    D. The average battery range in 2010 was 80 miles, which is less than half the range in 2020.
15. Ecologist Dr. Lena Sharma studied the resilience of certain rainforest trees during periods of drought. She observed that trees connected by networks of symbiotic fungi (mycorrhizae) tended to survive longer than isolated trees. Sharma hypothesized that the fungal networks allow trees to share water and nutrients, giving connected trees a critical advantage during water scarcity.
    Which finding, if true, would most directly undermine Dr. Sharma's hypothesis?
    A. Droughts in the rainforest have become more frequent and severe in the past decade.
    B. Isolated trees have deeper root systems on average than trees connected by fungal networks.

0 8 2 1 7 0 2 7 6 0 7 6

Dokumen ini bersifat RAHASIA DAN MILIK INTELEKTUAL LENTERAGO.
Segala bentuk reproduksi atau distribusi tanpa izin tertulis dapat ditindak sesuai hukum yang berlaku.

C. A study found that during a drought, radioactive tracers injected into a struggling tree were detected in its healthier neighbors within 48 hours.
D. An analysis of tree health during a drought showed that connected trees and isolated trees exhibited the same rate of water loss in their leaves.

16. The discovery of exoplanets has revolutionized our understanding of planetary systems. While many exoplanets are gas giants similar to Jupiter, recent observations have revealed a number of Earth-sized planets orbiting within the habitable zone of their stars. As a result, astronomers now believe that _____.
Which choice most logically completes the text?
A. Earth-like planets are rare and unique to our solar system.
B. the universe may contain many planets capable of supporting life.
C. gas giants are more common than previously thought.
D. habitable zones are found only around young stars.

17. The Industrial Revolution brought about significant technological advancements, but it also led to harsh working conditions in factories. In response, labor movements emerged to advocate for workers' rights, including limits on working hours and improved safety standards. These efforts were often met with resistance from factory owners, who argued that _____.
Which choice most logically completes the text?
A. workers' rights were essential for long-term economic growth.
B. such reforms would reduce productivity and profits.
C. labor movements were irrelevant to industrial development.
D. better safety standards would complement technological innovation.

18. Studies on social media usage have shown that while it helps people stay connected, excessive use can lead to feelings of isolation and anxiety. Researchers argue that the constant comparison with others' curated lives can undermine self-esteem. Therefore, moderating social media consumption is crucial for _____.
Which choice most logically completes the text?
A. maintaining physical health and fitness.
B. ensuring financial stability and security.
C. promoting psychological well-being.
D. enhancing social connections and networks.

19. Enzymes are biological catalysts that speed up chemical reactions in cells. Each enzyme is specific to a particular substrate, and its activity can be influenced by factors such as temperature and pH. When an enzyme denatures, it loses its shape and function, which means that _____.
Which choice most logically completes the text?
A. it becomes more effective at catalyzing reactions.
B. it can no longer bind to its substrate properly.
C. it replicates itself to form new enzymes.
D. it enhances the reaction rate indefinitely.

20. To conserve moisture during extended dry spells, many desert seedlings _____ a suspended-growth state called quiescence until rains return.
Which choice completes the text so that it conforms to the conventions of Standard English?
A. enter
B. to enter
C. having entered
D. entering

0 8 2 1 7 0 2 7 6 0 7 6

Dokumen ini bersifat RAHASIA DAN MILIK INTELEKTUAL LENTERAGO.

21. Formed with only four members, the scientific consortium expanded over the next decade; by 2012 the organization _____ its founding membership.
    Which choice completes the text so that it conforms to the conventions of Standard English?
    A. has doubled
    B. had doubled
    C. doubles
    D. will double
22. Some species maintain broad seasonal migrations; _____, many island-endemic species do not migrate at all.
    Which choice completes the text so that it conforms to the conventions of Standard English?
    A. For example,
    B. In contrast,
    C. Consequently,
    D. Therefore,
23. While researching microprobes, a student has taken the following notes:
    - Microprobes analyze material at microscopic scales (micrometer-sized spots).
    - They require only tiny sample volumes.
    - Some microprobes measure elemental or isotopic composition in situ, so specimens are not destroyed.
    - Used in geology, archaeology, and materials science to pinpoint composition within complex samples.

    The student wants to explain an advantage of microprobes. Which choice most effectively uses relevant information from the notes to accomplish this goal?
    A. Microprobes are small instruments often used in laboratory settings.
    B. Because microprobes use only tiny sample volumes, they are cheaper than all other laboratory instruments.
    C. Many researchers prefer microprobes because they have greater power than macroscopic instruments.
    D. Microprobes can determine the composition of microscopic regions in a sample without destroying the surrounding material, allowing precise, in-place analysis.
24. While preparing an introduction for an audience unfamiliar with the novel Paradise and its author, a student has taken these notes:
    - Paradise (published 1994) is set in colonial East Africa and follows a young protagonist drawn into commerce and colonial encounters.
    - Author Abdulrazak Gurnah is a Tanzanian-born novelist whose work explores displacement and identity.
    - He won the Nobel Prize in Literature in 2021.
    - Paradise blends historical detail with personal coming-of-age themes.

    The student wants to introduce Paradise to an audience unfamiliar with the novel and its author. Which choice most effectively uses relevant information from the notes to accomplish this goal?
    A. *Paradise* is a historical novel set in East Africa that traces a young man's coming-of-age amid colonial trade; its author, Abdulrazak Gurnah, a Tanzanian novelist who won the 2021 Nobel Prize, often writes about displacement and identity.
    B. *Paradise* is a novel that some readers like; Gurnah is an author who has written other books.
    C. Abdulrazak Gurnah wrote Paradise in 1994; he later won the Nobel Prize.

0 8 2 1 7 0 2 7 6 0 7 6

Dokumen ini bersifat RAHASIA DAN MILIK INTELEKTUAL LENTERAGO.
Segala bentuk reproduksi atau distribusi tanpa izin tertulis dapat ditindak sesuai hukum yang berlaku.

D. *Paradise* contains historical detail, and Gurnah's style is notable.

25. The student has the following two sentences and wants to write one sentence that emphasizes the relative sizes of the two capitals' populations:
    - Sentence 1: "Lagos's population is about 14 million people."
    - Sentence 2: "Vilnius has roughly 600,000 residents, which is a large proportion of Lithuania's urban population."

    Which choice most effectively uses information from the given sentences to emphasize the relative sizes of the two capitals' populations?

    A. Lagos has 14 million residents, and Vilnius has about 600,000 residents.
    B. Vilnius, with roughly 600,000 people, is far smaller in population than Lagos, which has about 14 million people.
    C. Although Vilnius's population (about 600,000) is small compared with Lagos (about 14 million), Vilnius represents a substantial share of its nation's urban population while Lagos is one of the world's largest cities.
    D. Both capitals are important political centers with different population sizes.

26. While researching centers of learning, a student took these notes about a medieval library and academy:
    - The academy collected manuscripts from many regions.
    - Scholar-translators rendered texts into the common scholarly language.
    - Scribes copied texts by hand and created organized catalogs.
    - Students and visiting scholars studied and recopied works, spreading copies to other institutions.

    The student wants to explain how this academy preserved the world's knowledge. Which choice most effectively uses relevant information from the notes to accomplish this goal?

    A. The academy amassed manuscripts from diverse regions and served as a center for study, which indirectly helped some works survive through time.
    B. By collecting manuscripts, translating them into a shared scholarly language, producing accurate copies, and keeping organized catalogs that others could consult and replicate, the academy preserved and spread knowledge across regions.
    C. The academy preserved texts primarily by limiting their circulation and storing originals under strict control so only select scholars could access them.
    D. Scholars at the academy trained skilled copyists who reproduced manuscripts by hand and circulated annotated versions to other learning centers.

27. A student researching recent studies on plant identification took these notes about a team led by Glickman, Brown, and Song:
    - They compiled measurements of leaf shape, vein pattern, and surface texture for many specimens.
    - The team used statistical classification models and cross-validation to assess accuracy.
    - Their results included probability scores indicating how likely each specimen belonged to particular species.
    - The study focused on reproducible, quantitative methods rather than anecdotal descriptions.

    The student wants to make a generalization about the kind of study conducted by Glickman, Brown, and Song. Which choice most effectively uses relevant information from the notes to accomplish this goal?

    A. They compiled measurements of leaf features and produced a manual combining quantitative metrics with descriptive notes to guide field identification.

0 8 2 1 7 0 2 7 6 0 7 6

Dokumen ini bersifat RAHASIA DAN MILIK INTELEKTUAL LENTERAGO.
Segala bentuk reproduksi atau distribusi tanpa izin tertulis dapat ditindak sesuai hukum yang berlaku.

B. Their study used historical herbarium specimens and literature comparisons to infer species identities without focusing on numerical classification models.
C. They used numerical measurements of leaf morphology and statistical classification models, with cross-validation and probability scores, to provide reproducible, quantitative species identifications.
D. The researchers emphasized consensus from expert observers and detailed descriptive comparisons as the primary basis for assigning specimens to species.

MODULE 2: Reading and Writing (27 Questions)

Directions:

The questions in this section address a number of important reading and writing skills. Each question includes one or more passages, which may include a table or graph. Read each passage and question carefully, and then choose the best answer to the question based on the passage(s).

All questions in this section are multiple-choice with four answer choices. Each question has a single best answer.

28. The community garden program began as a way to provide food to low-income families, but it has since become _____ a gathering place that fosters cross-cultural exchange and local entrepreneurship.
    Which choice completes the text with the most logical and precise word or phrase?
    A. largely
    B. merely
    C. precisely
    D. fundamentally
29. Recent fieldwork indicates that the inland marshes are _____ threatened by rising salinity, a consequence of altered freshwater flows from upstream reservoirs.
    Which choice completes the text with the most logical and precise word or phrase?
    A. nominally
    B. increasingly
    C. paradoxically
    D. occasionally
30. Because the satellite images revealed unexpected soil moisture anomalies, the research team had to _____ their drought-forecast timeline.
    Which choice completes the text with the most logical and precise word or phrase?
    A. expedite
    B. postpone
    C. abandon
    D. simplify
31. The workshop emphasized that clarity of evidence, not rhetorical flair, _____ the persuasiveness of a scientific claim.
    Which choice completes the text with the most logical and precise word or phrase?
    A. undermines
    B. determines
    C. discounts
    D. disguises

0 8 2 1 7 0 2 7 6 0 7 6

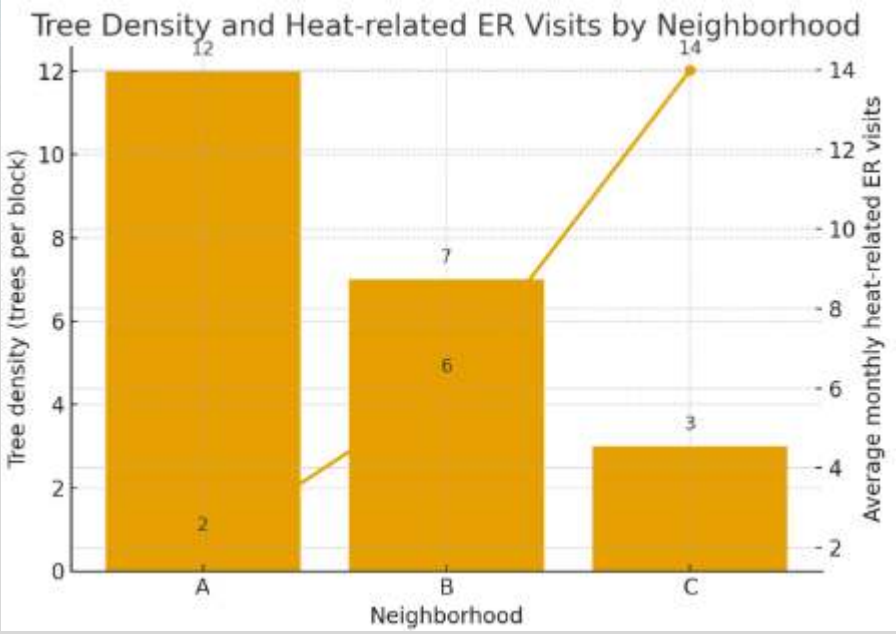
Dokumen ini bersifat RAHASIA DAN MILIK INTELEKTUAL LENTERAGO.
Segala bentuk reproduksi atau distribusi tanpa izin tertulis dapat ditindak sesuai hukum yang berlaku.

32. The late-blooming cultivar produced small yields in Year 1; however, after soil amendments were applied, its yield _____ that of the earlier cultivar.
    Which choice completes the text with the most logical and precise word or phrase?
    A. approached
    B. superseded
    C. resembled
    D. paralleled
33. The following paragraph is adapted from a short report on a public-library renovation.
    The city recently converted the old Carnegie library into a community hub. This renovation included installing a digital archive of local newspapers, a makerspace, and expanded meeting rooms for neighborhood groups. Patrons praised the new resources for enabling research and offering free workshops; attendance at evening programs tripled within six months.
    Which choice best states the function of the underlined sentence in the overall structure of the text?
    A. It introduces the specific features of the renovation that the following sentences then discuss.
    B. It provides a contrasting point to the claim made in the first sentence.
    C. It elaborates on the library's historical significance mentioned earlier.
    D. It concludes the paragraph by summarizing the renovation's benefits.
34. Urban gardens provide fresh produce; moreover, they create micro-economies that support small vendors.
    Which choice best describes the function of the underlined portion in the text as a whole?
    A. It presents an unexpected counterexample.
    B. It gives an additional benefit that strengthens the main claim.
    C. It qualifies the prior assertion with a limiting exception.
    D. It repeats information already given in different words.
35. The author argues that early literacy programs are effective. This evidence, however, relies on a narrow sample.
    Which choice best describes the function of the underlined portion in the text as a whole?
    A. It introduces supporting data.
    B. It challenges the strength of the evidence.
    C. It summarizes the author's main claim.
    D. It explains the program's long-term benefits.
36. Dorian, a volunteer coordinator, arranged weekend repairs for community shelters. He keeps a daily log of material donations, and neighbors frequently rely on his schedule to plan drop-offs. Last winter he coordinated emergency deliveries after the storm.
    According to the text, what is true about Dorian?
    A. Dorian is primarily responsible for fundraising.
    B. Dorian's scheduling helps neighbors deliver supplies efficiently.
    C. Dorian rarely participates in hands-on repair work.
    D. Dorian serves as a paid city contractor for shelters.

0 8 2 1 7 0 2 7 6 0 7 6

Dokumen ini bersifat RAHASIA DAN MILIK INTELEKTUAL LENTERAGO.
Segala bentuk reproduksi atau distribusi tanpa izin tertulis dapat ditindak sesuai hukum yang berlaku.

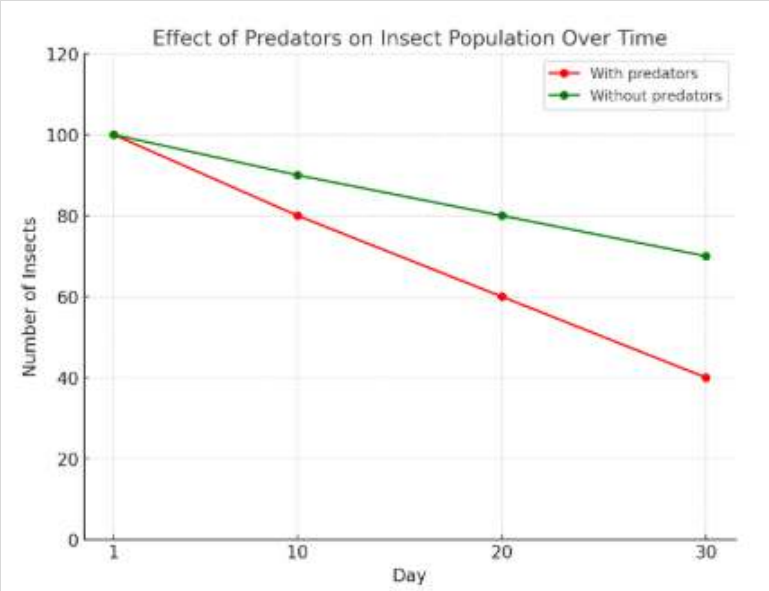
37. Urban planners often argue that environmental design can have a direct effect on public health. Charles and Stephens, two researchers at the City Institute, recently investigated whether neighborhood greenery might influence the number of heat-related medical emergencies during summer. Charles and Stephens claim that neighborhoods with more street trees have fewer heat-related ER visits.



Which choice best describes data in the graph that support Charles and Stephens's claim?

A. The inverse relationship between tree density and ER visits across the three neighborhoods.
B. The higher ER visits in Neighborhood C despite its moderate tree density.
C. The fact that Neighborhood B has fewer trees but also low ER visits.
D. The similar ER visit rates across all neighborhoods despite differing tree counts.

38. A student studied the effect of predators on an insect population. He set up two enclosures: one with predators and one without. He tracked the number of insects in each enclosure for 30 days. The graph below shows the insect population over time.



The student concluded that the decrease in the insect population in the enclosure with predators was entirely due to the presence of predators.

0 8 2 1 7 0 2 7 6 0 7 6

Dokumen ini bersifat RAHASIA DAN MILIK INTELEKTUAL LENTERAGO.
Segala bentuk reproduksi atau distribusi tanpa izin tertulis dapat ditindak sesuai hukum yang berlaku.

Which choice best describes data from the graph that weaken the student's conclusion?

A. The insect population was the same in both enclosures on day 1.
B. The insect population decreased in both enclosures over the 30 days.
C. The largest decrease in population occurred in the enclosure with predators.
D. The insect population on day 30 was lower in the enclosure with predators.

39. A research team examined whether nocturnal pollinators increase fruit set in a nocturnally flowering shrub. They concluded that presence of moths correlates with higher fruit set.
Which finding, if true, would most strongly support the team's conclusion?
A. Observations showed that when moth access was blocked, fruit set dropped by 60%.
B. Daytime insects visited the flowers less frequently than nocturnal insects.
C. Fruit set varied with soil moisture across sites.
D. Moth abundance rose in years with unusually warm summers.

40. Suarez, Pérez-Huerta, and Harrell claim that a specific enzyme helps plants tolerate salt by increasing sodium sequestration in root vacuoles.
Which finding, if true, would most directly support Suarez, Pérez-Huerta, and Harrell's claim?
A. Plants lacking the enzyme show reduced sodium accumulation in vacuoles under salt stress.
B. Salt-tolerant plants often have smaller root systems.
C. Soil salinity affects nutrient uptake in various species.
D. Overexpression of a different transporter increases sodium efflux to leaves.

41. Researchers hypothesize that brief exposure to low oxygen levels improves heart cells' resistance to later ischemia.
Which finding, if true, would most directly support the researchers' hypothesis?
A. Lab-grown heart cells preconditioned with short hypoxia survived subsequent ischemic challenge more often than unconditioned cells.
B. Prolonged hypoxia damages heart-cell mitochondria.
C. Whole-animal studies show complex physiological changes after varied oxygen exposure.
D. Short hypoxia increases expression of genes unrelated to stress response.

42. People favoring the traditional view argue voters base choices mainly on long-standing party loyalty rather than short-term events. Washington and Mullainathan find that immediate local economic shocks strongly predict vote swings.
Which finding from Washington and Mullainathan's study, if true, would most directly weaken the claim made by people who favor the traditional view of voter behavior?
A. Voting patterns shift primarily in response to long-term demographic changes.
B. Short-term local economic indicators have a measurable effect on vote choice in election-year surveys.
C. Party loyalty remains unchanged among older voters.
D. National-level media coverage correlates with voter turnout.

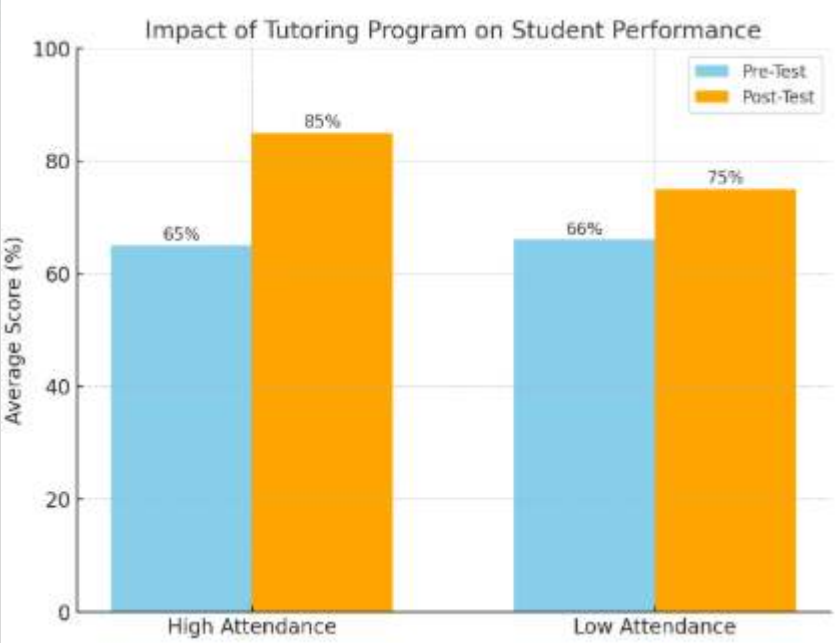
43. Researchers investigating the impact of a new tutoring program on student performance hypothesized that the program would be most effective for students who attended sessions regularly. They tracked the final exam scores of two groups of students: one group that participated in the program and attended at least 90% of the sessions (high attendance), and another group that participated but attended less than 50% of the sessions (low attendance). The researchers concluded that the program's effectiveness is directly tied to the level of student participation.



Which choice best describes data from the graph that weaken the researchers' conclusion?

A. The post-test average for Group 1 was higher than the post-test average for Group 2.
B. Both groups had similar average scores on the pre-test before the program began.
C. Group 2's average score increased from the pre-test to the post-test despite low attendance.
D. The increase in average scores from pre-test to post-test was larger for Group 1 than for Group 2.

44. A journalist claims that small coastal towns with diversified fisheries recovered faster after the embargo than towns dependent on a single species.
Which finding, if true, would most directly support the journalist's claim?

A. Towns with multiple fish markets saw quicker reopening of trade routes after embargoes ended.
B. Export licenses were distributed unevenly across ports.
C. Consumer demand for one species declined globally during the embargo.
D. Small towns received more federal aid per capita than larger ports.

45. To protect sensitive data, the new protocol requires that researchers encrypt all datasets _____ transfer to external servers.
Which choice completes the text so that it conforms to the conventions of Standard English?

A. before
B. during
C. since
D. unless

0 8 2 1 7 0 2 7 6 0 7 6

46. The board of trustees, after a lengthy and contentious debate about the university's future direction, _____ finally reached a consensus. This decision paves the way for a significant restructuring of the academic programs.
    Which choice completes the text so that it conforms to the conventions of Standard English?
    A. have
    B. has
    C. are
    D. were
47. The complex negotiations between the two countries, which had stalled several times over minor details, _____ successfully concluded last week. This outcome was a relief to international observers.
    Which choice completes the text so that it conforms to the conventions of Standard English?
    A. was
    B. were
    C. are
    D. have been
48. Both the grant application and the supporting letters _____ required by the funding agency.
    Which choice completes the text so that it conforms to the conventions of Standard English?
    A. is
    B. are
    C. was
    D. has been
49. The city increased fines for illegal dumping. _____, reports of roadside trash decreased significantly within two months.
    Which choice completes the text with the most logical transition?
    A. Consequently
    B. Meanwhile
    C. Nevertheless
    D. Conversely
50. The study found an association between screen time and sleep disruption. _____, it did not establish a causal link because it relied on observational data.
    Which choice completes the text with the most logical transition?
    A. Therefore
    B. Furthermore
    C. However
    D. As a result
51. Renewable energy adoption rose sharply in the region over five years. _____, local coal production declined as some mines closed.
    Which choice completes the text with the most logical transition?
    A. Similarly
    B. Meanwhile
    C. Consequently
    D. Conversely

52. The director praised the volunteers' stamina during the heat wave. _____, she urged the public to donate water and sunscreen stations.
    Which choice completes the text with the most logical transition?
    A. Even so
    B. At the same time
    C. For that reason
    D. On the contrary
53. Notes about a study on acoustic tags:
    - Acoustic tags attach to fish to track movement.
    - Tags transmit short signals that receivers detect within 200 m.
    - Tag battery life averages 18 months.
    - Some species show site fidelity while others migrate seasonally.

    The student wants to explain an advantage of acoustic tags. Which choice most effectively uses relevant information from the notes to accomplish this goal?
    A. Acoustic tags are cheap to manufacture and are often reused between seasons.
    B. Researchers can track individual fish movements over many months without recapture, revealing migration patterns.
    C. Acoustic tagging requires fish to be removed permanently from their habitats.
    D. Tags provide detailed genetic information about populations.
54. Notes about a novelist and her novel *Seaward*:
    - *Seaward* (2010) follows a young fisher's child across a coastal city during modernization.
    - The author, Laila Mendes, was born in a port town and often writes about displacement.
    - *Seaward* blends local dialect with formal narration and received critical attention for its sensory descriptions.

    The student wants to introduce *Seaward* and its author to readers who are unfamiliar with both. Which choice most effectively uses relevant information from the notes to accomplish this goal?
    A. *Seaward* is an acclaimed 2010 novel by Laila Mendes that chronicles a young protagonist's experience in a changing port city; Mendes.
    B. Laila Mendes wrote *Seaward*; it contains many images of the sea.
    C. *Seaward* is a 2010 novel set in a city; Mendes is a writer from a coastal area.
    D. The novel *Seaward* features regional speech and won awards for style.
