MODULE 1: Reading and Writing (27 Questions)

Directions:

The questions in this section address a number of important reading and writing skills. Each question includes one or more passages, which may include a table or graph. Read each passage and question carefully, and then choose the best answer to the question based on the passage(s).

All questions in this section are multiple-choice with four answer choices. Each question has a single best answer.

1. Simón Bolívar, known as "The Liberator," played a pivotal role in South America's independence from Spain: his military campaigns led to the sovereignty of multiple nations. Despite his victories, his dream of a unified Gran Colombia ultimately collapsed, leaving behind a _____ legacy of both triumph and fragmentation.
   Which choice completes the text with the most logical and precise word or phrase?
   A. dubious
   B. complex
   C. forgotten
   D. celebrated

2. In her review of Susanna Clarke's *Piranesi*, the critic marveled at the novel's labyrinthine setting, which functions as both a physical and metaphysical space. The house, with its endless halls and statues, is not merely a backdrop but an active participant in the narrative, making the protagonist's journey of self-discovery deeply _____.
   Which choice completes the text with the most logical and precise word or phrase?
   A. allegorical
   B. predictable
   C. monotonous
   D. contemporary

3. The launch of Sputnik 1 by the Soviet Union in 1957 sent shockwaves through the Western world. This single event, a 58-centimeter sphere emitting radio signals from orbit, single-handedly _____ the Space Age and triggered a dramatic increase in science funding in the United States.
   Which choice completes the text with the most logical and precise word or phrase?
   A. predicted
   B. concluded
   C. inaugurated
   D. complicated

4. A 2024 study by glaciologist Dr. Alina Petrova revealed that dark-colored algae are accelerating ice melt in Greenland. These algae, which bloom on the ice surface, reduce its albedo—a surface's ability to reflect sunlight—thereby _____ a feedback loop that worsens sea-level rise.
   Which choice completes the text with the most logical and precise word or phrase?
   A. mitigating
   B. initiating
   C. reversing
   D. concealing

0 8 2 1 7 0 2 7 6 0 7 6

Dokumen ini bersifat RAHASIA DAN MILIK INTELEKTUAL LENTERAGO.

5. The axolotl, a Mexican salamander, possesses a phenomenal regenerative ability—it can regrow lost limbs, jaws, and even parts of its brain. This makes it one of the most _____ subjects of study in the field of regenerative medicine.
   Which choice completes the text with the most logical and precise word or phrase?
   A. elusive
   B. controversial
   C. promising
   D. common

6. According to urban planner Dr. Ben Carter, the key to reducing city traffic lies not in building more roads, but in investing in robust public transit. He argues that this approach addresses the root cause of congestion: the sheer volume of private vehicles. Therefore, cities that prioritize subways and buses often see a corresponding drop in traffic delays.
   Which choice best describes the function of the underlined sentence in the text as a whole?
   A. It presents a counterargument to Dr. Carter's main claim.
   B. It provides a specific example that supports Dr. Carter's argument.
   C. It questions the feasibility of Dr. Carter's proposal.
   D. It summarizes the expected outcome of following Dr. Carter's advice.

7. **Text 1:** Conventional wisdom in neuroscience has long held that the adult human brain is largely fixed and incapable of generating new neurons.
   Text 2: However, the work of neuroscientist Dr. Jonas Frisén demonstrated that neurogenesis—the birth of new neurons—does occur in the hippocampus of the adult human brain. His team used innovative carbon-14 dating methods to prove that this process continues throughout a person's life.
   Based on the texts, how would Dr. Frisén (Text 2) most likely respond to the "conventional wisdom" discussed in Text 1?
   A. By acknowledging its general accuracy but clarifying it applies only to specific brain regions.
   B. By arguing that it is outdated and contradicted by direct evidence of ongoing neurogenesis.
   C. By suggesting that his findings are only applicable to animal models, not humans.
   D. By conceding that his methods were too limited to challenge such a well-established view.

8. A probe designed for Venus would be crushed in moments on the gas giant Jupiter. While Venus has extreme pressure and heat, Jupiter's atmospheric pressure increases to millions of times Earth's pressure deep in its atmosphere, a force that would destroy any structure built for other planets.
   According to the text, why would a Venus probe be destroyed on Jupiter?
   A. Because Jupiter's atmosphere is composed primarily of hydrogen.
   B. Because the probe would be unable to transmit data from that distance.
   C. Because Jupiter's atmospheric pressure is immensely greater.
   D. Because Jupiter lacks a solid surface for landing.

9. The Silk Road was not a single road but a vast network of trade routes connecting China to the Mediterranean. For centuries, it facilitated the exchange of goods, ideas, and technologies, making it a primary driver of cultural and economic development across Eurasia.
   Which choice best states the main idea of the text?
   A. China was the most technologically advanced civilization along the Silk Road.
   B. The Silk Road was a complex network that enabled significant intercultural exchange.
   C. The primary purpose of the Silk Road was the spread of religious ideas.
   D. Travel along the Silk Road was dangerous and required military protection.

10. A corporate research group surveyed four departments about a new "Flex-Time" policy that allows employees to set their own work hours. The group hypothesized that the policy's success would depend on the nature of the department's work, predicting it would be more popular in roles focused on independent, project-based outcomes rather than those requiring constant customer-facing availability or strict financial reporting deadlines. The graph below shows the percentage of employees in each department who reported a positive experience with the policy.

   Which choice best describes data from the graph that support the researchers' conclusion?
   A. A majority of the Engineering department responded positively.
   B. The Marketing department's positive response was close to that of Engineering.
   C. The positive response was significantly higher in Engineering and Marketing than in HR and Finance.
   D. The Finance department had the lowest positive response rate.

11. Dr. Lena Foster, a behavioral ecologist, hypothesized that the primary function of a zebra's stripes is to deter biting flies, which are known to avoid striped patterns. She theorized that this would provide a significant evolutionary advantage. Consequently, Dr. Foster predicted that zebra populations in regions with the highest density of biting flies would have evolved to possess the most pronounced and numerous stripes as a result of this selective pressure.
   Which finding, if true, would most directly undermine Dr. Foster's hypothesis?

0 8 2 1 7 0 2 7 6 0 7 6

Dokumen ini bersifat RAHASIA DAN MILIK INTELEKTUAL LENTERAGO.
Segala bentuk reproduksi atau distribusi tanpa izin tertulis dapat ditindak sesuai hukum yang berlaku.

A. Zebras in a region with an extremely high fly population have fainter and less numerous stripes than zebras in a region with very few flies.
B. Biting flies are equally attracted to striped and unstriped patterns in laboratory settings.
C. Zebras use their tails to swat away flies effectively.
D. The stripes of individual zebras become more pronounced as they age.

12. The author's new novel explores the intricate dynamics of a multigenerational family. While the plot meanders through time and perspective, the central theme of inherited trauma remains a _____ thread throughout the narrative.
Which choice most logically completes the text?
A. tenuous
B. consistent
C. decorative
D. convoluted

13. The discovery of well-preserved pottery in the ruins suggests the civilization had a sophisticated culture. However, the absence of any fortifications or weapon stores implies the society was relatively _____.
Which choice most logically completes the text?
A. militaristic
B. peaceful
C. nomadic
D. impoverished

14. The new battery technology promises to extend the range of electric vehicles dramatically. If the manufacturing costs can be reduced, it could become the _____ standard for the industry.
Which choice most logically completes the text?
A. outdated
B. provisional
C. universal
D. controversial

15. The team of astronomers _____ analyzing the new data from the telescope.
Which choice completes the text so that it conforms to the conventions of Standard English?
A. is
B. are
C. were
D. was

16. The results of the extensive survey _____ published in the journal next week.
Which choice completes the text so that it conforms to the conventions of Standard English?
A. is
B. are
C. was
D. being

17. The novel, alongside its companion essays, _____ a comprehensive portrait of the era.
    Which choice completes the text so that it conforms to the conventions of Standard English?
    A. present
    B. presents
    C. presenting
    D. have presented

18. Each of the participants _____ given a unique identifier.
    Which choice completes the text so that it conforms to the conventions of Standard English?
    A. were
    B. are
    C. was
    D. have been

19. The committee has been deliberating on the new policy for weeks. After a final review of the feedback, it _____ its decision final and will announce it tomorrow.
    Which choice completes the text so that it conforms to the conventions of Standard English?
    A. have considered
    B. considers
    C. consider
    D. are considering

20. The number of applicants for the scholarship _____ increased this year.
    Which choice completes the text so that it conforms to the conventions of Standard English?
    A. have
    B. has
    C. are
    D. is

21. The collection of short stories, including the award-winning one, _____ on the top shelf.
    Which choice completes the text so that it conforms to the conventions of Standard English?
    A. reside
    B. resides
    C. residing
    D. are residing

22. Neither the manager nor the employees _____ about the schedule change.
    Which choice completes the text so that it conforms to the conventions of Standard English?
    A. was informed
    B. were informed
    C. informs
    D. has informed

23. These are notes that were taken by a student:
    - Microprobes are tiny scientific instruments weighing less than one gram.
    - Their minimal weight makes them extremely inexpensive to produce in large quantities.
    - They can be deployed by the thousands from a single launch vehicle.
    - This allows for simultaneous data collection from a vast geographical area.
    - They are designed to withstand extreme atmospheric conditions.
    - Their small size allows them to be dispersed by wind patterns for comprehensive coverage.

    The student wants to explain an advantage of microprobes. Which choice most effectively uses relevant information from the notes to accomplish this goal?

    A. Microprobes are very small and light, which means they are cheap to make and can be sent out in huge numbers.
    B. The primary advantage of microprobes is that their tiny, lightweight design allows for inexpensive mass production and deployment, enabling widespread data collection from a single launch.
    C. Because they are so small, microprobes can be sent out in large numbers to collect data from many places at once.
    D. Microprobes are advantageous because they are tiny, inexpensive, and can be deployed in large numbers from one launch vehicle to gather widespread data.

24. These are notes that were taken by a student:
    - Mariana Enriquez is a renowned journalist and author from Argentina.
    - Her 2019 short story collection, *The Dangers of Smoking in Bed*, was translated into English in 2021.
    - The book was a finalist for the International Booker Prize, gaining a global readership.
    - The stories are set in modern Argentina and blend supernatural horror with gritty realism.
    - They critically explore social issues like poverty, inequality, and political violence.
    - Critics praise the collection for its unsettling atmosphere and powerful social commentary.

    The student wants to introduce *The Dangers of Smoking in Bed* to an audience unfamiliar with the book and its author. Which choice most effectively uses relevant information from the notes to accomplish this goal?

    A. Argentine writer Mariana Enriquez is a journalist whose work was shortlisted for the International Booker Prize.
    B. *The Dangers of Smoking in Bed* is a critically acclaimed short story collection by Argentine writer Mariana Enriquez that uses supernatural horror to examine contemporary social issues in Argentina.
    C. The International Booker Prize shortlisted a book that blends horror with social commentary, written by Mariana Enriquez.
    D. Mariana Enriquez's stories are known for their unsettling atmosphere and are set in her native Argentina.

25. These are notes that were taken by a student:
    - Uruguay's capital, Montevideo, has a population of 1.3 million people.
    - The total population of the country of Uruguay is 3.4 million people.
    - This means Montevideo contains approximately 38% of the nation's entire population.
    - Mongolia's capital, Ulaanbaatar, has a population of 1.6 million people.
    - The total population of the country of Mongolia is 3.3 million people.
    - This means Ulaanbaatar contains approximately 48% of the nation's entire population.

    Which choice most effectively uses information from the given sentences to emphasize the relative sizes of the two capitals' populations?

    A. Montevideo has 1.3 million people, and Ulaanbaatar has 1.6 million, but Uruguay has a slightly larger total population than Mongolia.
    B. The capitals of Uruguay and Mongolia have 1.3 million and 1.6 million people, respectively, and both house a large portion of their national populations.
    C. Although the two countries have similar total populations, Mongolia's capital, Ulaanbaatar, is home to a larger share of its population (48%) than Uruguay's capital, Montevideo (38%).
    D. Uruguay's total population is 3.4 million, and its capital is Montevideo, while Mongolia's total population is 3.3 million, and its capital is Ulaanbaatar.

26. These are notes that were taken by a student:
    - The Royal Library of Ashurbanipal was the first systematically organized library in the ancient Middle East.
    - It was established in the 7th century BCE in the Assyrian capital of Nineveh by King Ashurbanipal.
    - The king was a scholar who sent scribes across his empire to collect and copy texts.
    - The collection included works on medicine, astronomy, literature, and royal decrees.
    - Many texts were written in cuneiform on clay tablets.
    - When the palace was burned in 612 BCE, the fire baked and preserved the tablets instead of destroying them.

    The student wants to explain how the Royal Library of Ashurbanipal preserved knowledge. Which choice most effectively uses relevant information from the notes to accomplish this goal?

    A. The Royal Library of Ashurbanipal, assembled by a scholarly king, preserved knowledge by systematically collecting texts from across the empire on clay tablets, which were then fortuitously hardened and saved by the fire that destroyed the palace.
    B. The library was established by King Ashurbanipal and contained many important texts from the ancient world.
    C. The fire that destroyed Nineveh baked the clay tablets in the library, which preserved them for archaeologists to find.
    D. King Ashurbanipal was a scholar who created a great library in Nineveh with texts on many subjects.

27. These are notes that were taken by a student:
    - A team of sociologists, Dr. Anna Lee and Dr. Samuel Jones, sought to understand the factors influencing community resilience after natural disasters.
    - They analyzed decades of demographic, economic, and social data from hundreds of affected towns.
    - They employed advanced statistical modeling to identify correlations and causal relationships.
    - Their study concluded that the density of local social networks was the strongest predictor of a rapid recovery.
    - They suggested that their methodology could be used to identify vulnerable communities before a disaster strikes.
    - The study was published in a peer-reviewed journal and has influenced emergency management policy.

    The student wants to make a generalization about the kind of study conducted by Dr. Lee and Dr. Jones. Which choice most effectively uses relevant information from the notes to accomplish this goal?

    A. Dr. Lee and Dr. Jones concluded that strong social networks are the key to community recovery after disasters.
    B. Researchers used statistical models to prove that social networks help communities recover from disasters.
    C. Sociologists have conducted a study using statistical methods on community data to identify key factors in resilience.
    D. A study analyzed data to find that social networks help communities, and this can influence policy.

MODULE 2:

Directions:

The questions in this section address a number of important reading and writing skills. Each question includes one or more passages, which may include a table or graph. Read each passage and question carefully, and then choose the best answer to the question based on the passage(s).

All questions in this section are multiple-choice with four answer choices. Each question has a single best answer.

28. A revival of Arthur Miller's *Death of a Salesman* emphasized the contemporary relevance of Willy Loman's struggle. The production highlighted how his pursuit of an increasingly unattainable version of success mirrors modern anxieties about economic mobility, making his ultimate downfall feel particularly _____ to today's audiences.
    Which choice completes the text with the most logical and precise word or phrase?
    A. triumphant
    B. antiquated
    C. resonant
    D. incomprehensible

29. The process of carbon capture, while technologically promising, has faced criticism for its high energy requirements. Environmental engineer Dr. Anya Sharma has argued that until renewable energy powers these systems, their net environmental benefit remains _____, as the emissions from the energy used could offset the carbon captured.
    Which choice completes the text with the most logical and precise word or phrase?
    A. negligible
    B. guaranteed
    C. revolutionary
    D. instantaneous

30. The global semiconductor shortage exposed the fragility of just-in-time manufacturing models that had dominated industry for decades. While economists don't expect a full return to stockpiling, many now argue that maintaining strategic reserves of critical components is _____ for preventing future disruptions.
    Which choice completes the text with the most logical and precise word or phrase?
    A. optional
    B. detrimental
    C. indispensable
    D. premature

0 8 2 1 7 0 2 7 6 0 7 6

Dokumen ini bersifat RAHASIA DAN MILIK INTELEKTUAL LENTERAGO.

31. The following text is from William Wordsworth's poem "*I Wandered Lonely as a Cloud*":

    I wandered lonely as a cloud
    That floats on high o'er vales and hills,
    When all at once I saw a crowd,
    A host, of golden daffodils;
    Beside the lake, beneath the trees,
    Fluttering and dancing in the breeze.

    Which choice best describes the overall structure of the text?
    A. It presents a chronological sequence of events from morning to night.
    B. It moves from a description of solitude to a sudden discovery of communal joy in nature.
    C. It argues for the superiority of natural landscapes over urban environments.
    D. It contrasts the speaker's current happiness with past sorrows.

32. Historian Dr. Ben Carter's analysis of medieval trade argues that the Black Death, despite its devastation, ultimately led to economic empowerment for surviving laborers. <u>He cites the sharp rise in wages and the breakdown of the feudal system as evidence that the catastrophe created unexpected opportunities for social mobility.</u>
    Which choice best describes the function of the underlined portion in the text as a whole?
    A. It introduces the primary subject of Dr. Carter's research.
    B. It provides specific historical evidence to support Dr. Carter's argument.
    C. It presents a counterargument that Dr. Carter aims to refute.
    D. It summarizes the conventional wisdom about the Black Death.

33. From Charlotte Perkins Gilman's "*The Yellow Wallpaper*":
    I don't like to look out of the windows even—there are so many of those creeping women, and they creep so fast. <u>I wonder if they all come out of that wallpaper as I did?</u>
    Which choice best describes the function of the underlined sentence in the text as a whole?
    A. It reveals the narrator's deteriorating mental state and identification with the wallpaper's pattern.
    B. It provides a factual explanation for the presence of the women outside.
    C. It suggests that the narrator is observing a real community of women.
    D. It marks the moment the narrator begins to recover her sanity.

34. (Adapted from Oscar Wilde's *The Picture of Dorian Gray*)
    Lord Henry Wotton often spoke in paradoxes, finding truth in contradiction. Dorian, however, took these witty pronouncements as serious philosophy, applying them to his life with a literal-mindedness that Lord Henry found both alarming and fascinating.
    According to the text, what is true about Dorian?
    A. He is more intelligent and perceptive than Lord Henry.
    B. He misunderstands the playful nature of Lord Henry's advice.
    C. He shares Lord Henry's love for philosophical debate.
    D. He is completely unaware of Lord Henry's influence.

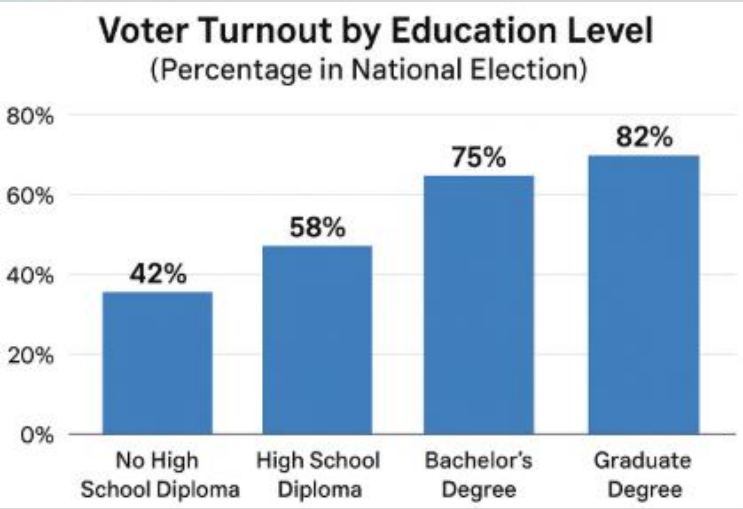
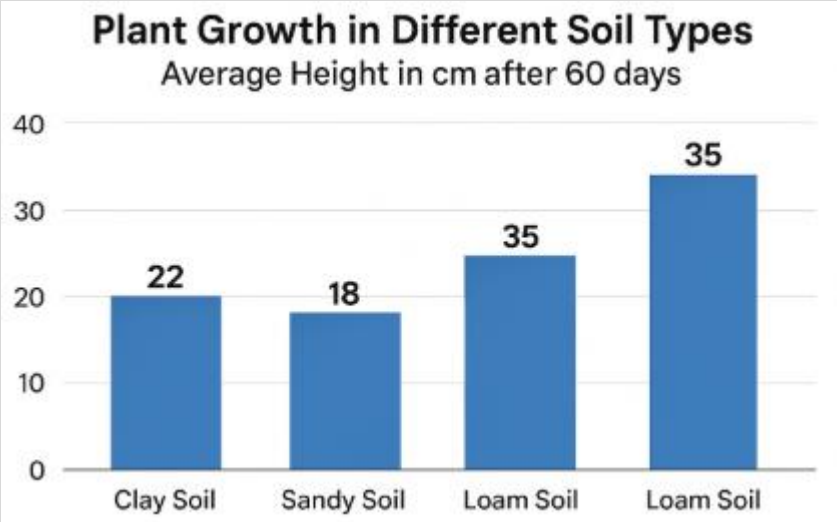
35. Political scientists Dr. Imani Jones and Dr. Ben Carter claim that educational attainment is a strong predictor of civic engagement, as it fosters the skills and confidence needed to participate in the democratic process.



Which choice best describes data in the graph that support Jones and Carter's claim?

A. A majority of people with a high school diploma or higher voted.
B. Voter turnout increases with each successive level of educational attainment.
C. The lowest voter turnout was among those without a high school diploma.
D. The difference in turnout between bachelor's and graduate degree holders is small.

36. A student assessed a plant growth in different soil types. A student concluded that the specific nutrient composition of the loam soil was the sole factor responsible for the superior plant growth observed in that group.



Which choice best describes data from the graph that weaken the student's conclusion?

A. Plants in clay soil grew taller than those in sandy soil.
B. Plants in loam soil grew significantly taller than plants in the other soil types.
C. Plants in sandy soil showed the least growth of all the groups.
D. The graph does not provide information about the nutrient composition of the soils.

0 8 2 1 7 0 2 7 6 0 7 6

Dokumen ini bersifat RAHASIA DAN MILIK INTELEKTUAL LENTERAGO.

37. A team of geologists led by Dr. Maria Flores studied erosion patterns on a remote island coastline. They concluded that the rapid cliff retreat was primarily caused by the mechanical force of powerful storm waves, which undercut the cliff base and caused sections to collapse.
    Which finding, if true, would most strongly support the team's conclusion?
    A. The island's cliffs are composed of a soft, easily eroded sandstone.
    B. Seismic sensors placed at the cliff base recorded the strongest vibrations during winter storms, precisely when the most collapses occurred.
    C. The rate of erosion has been constant for the past century.
    D. The water temperature around the island has been steadily increasing.

38. Paleontologists Dr. Lena Suarez, Dr. Javier Pérez-Huerta, and Dr. Lynn Harrell analyzed the bone structure of a newly discovered dinosaur, *Magnapaulia laticaudus*. They claim that its exceptionally wide tail vertebrae and powerful hind legs were adaptations for a semi-aquatic lifestyle, allowing it to swim efficiently in pursuit of prey.
    Which finding, if true, would most directly support Suarez, Pérez-Huerta, and Harrell's claim?
    A. Fossilized stomach contents from a Magnapaulia specimen contained the remains of large fish.
    B. The sediment where the fossils were found indicates a dry, arid environment.
    C. Magnapaulia's closest relatives were all small, land-dwelling herbivores.
    D. The dinosaur's teeth were better suited for grinding plants than catching fish.

39. Neuroscientists hypothesize that the brain's glymphatic system, which clears waste products during sleep, is most active during deep, non-REM sleep. They predict that any significant disruption to this sleep stage would result in a measurable accumulation of metabolic toxins in the brain tissue.
    Which finding, if true, would most directly support the researchers' hypothesis?
    A. People who sleep for more than 10 hours per night report higher energy levels.
    B. Patients with a sleep disorder that specifically suppresses deep sleep show elevated levels of beta-amyloid proteins in their cerebrospinal fluid.
    C. Aerobic exercise has been shown to improve the quality of REM sleep.
    D. The glymphatic system is also known to be active during waking hours, though at a lower level.

40. Proponents of the "expressive voting" theory claim that people vote primarily to express their identity and allegiance to a group, not because they believe their single vote will influence the election outcome. However, a comprehensive study by economists Dr. Eleanor Washington and Dr. Sendhil Mullainathan found that voters who believed the election would be very close were significantly more likely to turnout than those who believed the outcome was a foregone conclusion.
    Which finding from Washington and Mullainathan's study, if true, would most directly weaken the claim made by people who favor the "expressive voting" theory?
    A. Voters who strongly identified with a political party had the highest turnout rates regardless of the expected closeness of the race.
    B. The perceived closeness of an election had no effect on voter turnout among any demographic group.
    C. Voters who believed their vote could be decisive were more likely to turnout, even after controlling for party identity.

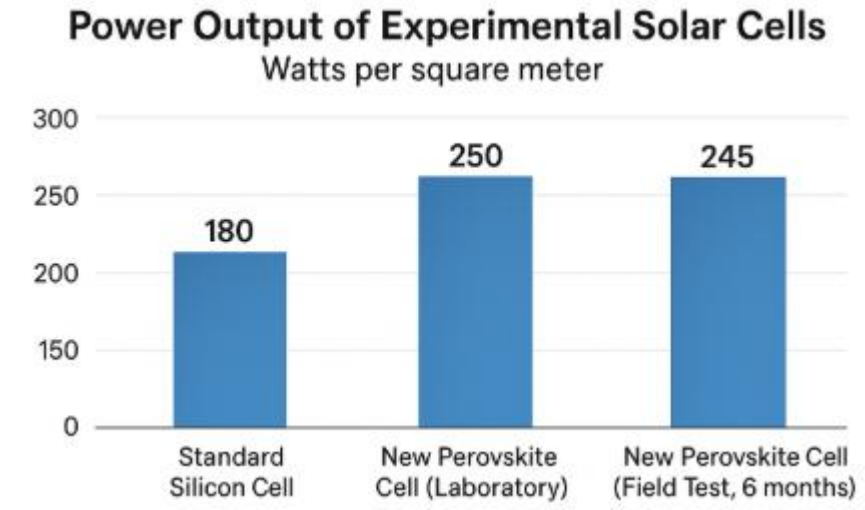
D. Expressive motivations were the most commonly cited reason for voting in post-election surveys.

41. Dr. Andre Taylor and colleagues concluded that their novel perovskite solar cell design maintains its high efficiency advantage over traditional silicon cells outside of controlled laboratory conditions.



Which choice best describes data from the graph that support Taylor and colleagues' conclusion?

A. The perovskite cell's output was higher than the silicon cell's in both laboratory and field tests.
B. The perovskite cell's output decreased slightly after six months in the field.
C. The standard silicon cell had the lowest power output.
D. The laboratory test showed the highest output for the perovskite cell.

42. An arts journalist claimed that director Ava DuVernay's film *Selma* (2014) successfully reframes the historical narrative of the Civil Rights Movement by focusing on the strategic organizing and collective action of the movement's leaders and participants, rather than presenting it as the story of a single, charismatic individual.

Which finding, if true, would most directly support the journalist's claim?

A. The film's screenplay was extensively workshopped with historians and participants of the Selma marches.
B. In the film, Martin Luther King Jr. is consistently shown in meetings with other leaders, debating strategy and relying on a broad coalition to make decisions.
C. Selma won the Academy Award for Best Picture.
D. The film's score incorporates traditional gospel music from the era.

43. The committee, after reviewing the extensive feedback from all regional offices and considering the potential financial implications, _____ its final recommendation to the board last Friday.

Which choice completes the text so that it conforms to the conventions of Standard English?

A. have submitted
B. submits
C. submit
D. submitted

44. Neither the initial proposal, which was drafted by the consultants, nor the subsequent revisions made by the internal team _____ to address the fundamental concerns raised by the oversight committee.
Which choice completes the text so that it conforms to the conventions of Standard English?
A. seem
B. seems
C. seeming
D. have seemed

45. The author's latest novel, a complex narrative that weaves together the stories of three generations of a single family, _____ to critical acclaim for its ambitious structure and emotional depth.
Which choice completes the text so that it conforms to the conventions of Standard English?
A. have been greeted
B. are greeted
C. has been greeted
D. is greeting

46. The collection of rare manuscripts, including several first editions and the author's personal letters, _____ in the university's special archives, where they are available for scholarly research.
Which choice completes the text so that it conforms to the conventions of Standard English?
A. reside
B. resides
C. residing
D. are residing

47. A recent analysis of the data, combined with new modeling techniques developed by the research team, _____ a much more nuanced understanding of the climate system's feedback loops.
Which choice completes the text so that it conforms to the conventions of Standard English?
A. suggest
B. suggests
C. suggesting
D. have suggested

48. The board's decision, which was reached after a marathon session that lasted well into the night, _____ a significant shift in the company's strategic direction.
Which choice completes the text so that it conforms to the conventions of Standard English?
A. represent
B. represents
C. representing
D. are representing

49. The treaty was intended to foster peace and cooperation between the two nations for decades to come. _____, within five years, border skirmishes had resumed, and diplomatic relations were severed.
Which choice completes the text with the most logical transition?
A. However,
B. Therefore,
C. Similarly,
D. Consequently,

50. The novel's protagonist embarks on a quest for self-discovery that takes him across three continents. _____, the narrative structure mirrors this journey, with each of the book's three parts set in a different location and exploring a different facet of his identity.
Which choice completes the text with the most logical transition?
A. For example,
B. Nevertheless,
C. Accordingly,
D. In contrast,

51. The initial clinical trials for the drug were extremely promising, showing a significant reduction in symptoms for over 80% of participants. _____, the pharmaceutical company decided to invest heavily in large-scale Phase III trials.
Which choice completes the text with the most logical transition?
A. However,
B. Instead,
C. Encouraged by these results,
D. Despite this,

52. The artist's early work was characterized by bold, expressive brushstrokes and a vibrant palette. _____, her later pieces became increasingly minimalist, relying on subtle gradations of a single color.
Which choice completes the text with the most logical transition?
A. Similarly,
B. For instance,
C. In other words,
D. In contrast,

53. These are notes that were taken by a student:
- The cheetah (Acinonyx jubatus) is the world's fastest land animal, capable of speeds up to 70 mph.
- Its speed is an adaptation for catching swift prey like gazelles on the African savanna.
- This high-speed pursuit comes at a great metabolic cost, generating immense body heat.
- Cheetahs can only maintain their top speed for 20-30 seconds before overheating.
- After a chase, a cheetah must rest for up to 30 minutes before it can hunt again.
- Their slender, lightweight build sacrifices strength, making them vulnerable to kleptoparasitism (theft of kills) by larger predators.

The student wants to emphasize the physiological trade-offs of the cheetah's speed. Which choice most effectively uses relevant information from the notes to accomplish this goal?

A. The cheetah is very fast, which helps it catch prey, but it can be robbed by other animals.
B. The cheetah's incredible speed, while essential for hunting, is physiologically taxing, requiring long recovery periods and leaving the lightweight predator vulnerable to having its kills stolen.
C. Cheetahs are fast but can only run for short bursts and then have to rest, and they are not very strong.
D. The adaptation for speed in cheetahs includes a lightweight build and the ability to run up to 70 mph.

54. These are notes that were taken by a student:

- The James Webb Space Telescope (JWST) is positioned at the second Lagrange point (L2), about 1.5 million kilometers from Earth.
- This location provides a stable gravitational point and a very cold, dark environment.
- The extreme cold is crucial for the telescope's infrared sensors to function without interference from heat.
- Being at L2 allows the telescope to have an unimpeded view of the universe, with the Sun, Earth, and Moon always positioned behind its sunshield.
- The JWST's primary mirror is 6.5 meters in diameter, much larger than the Hubble Space Telescope's 2.4-meter mirror.
- This large mirror allows it to collect more light and observe fainter, more distant objects.

The student wants to explain the advantages of the JWST's location at L2. Which choice most effectively uses relevant information from the notes to accomplish this goal?

A. The JWST is located at L2, which is far from Earth and very cold, and it has a large mirror.
B. The JWST's position at the L2 point provides a stable, cold, and dark environment, which is essential for its sensitive infrared observations and is maintained by a sunshield that blocks light and heat from the Sun, Earth, and Moon.
C. The telescope is at L2 to keep it cold so its infrared sensors will work, and it has a big mirror to see faint things.
D. Located at L2, the JWST is in a stable spot far from Earth, which helps it take clear pictures of the universe.
