MODULE 1: Reading and Writing (27 Questions)

Directions:

The questions in this section address a number of important reading and writing skills. Each question includes one or more passages, which may include a table or graph. Read each passage and question carefully, and then choose the best answer to the question based on the passage(s).

All questions in this section are multiple-choice with four answer choices. Each question has a single best answer.

1. The concept of "trophic cascades" describes how changes in predator populations can indirectly affect entire ecosystems. A classic example occurred in Yellowstone National Park after wolves were reintroduced in 1995. The wolves reduced elk populations, which allowed willow and aspen trees to recover from overgrazing. This vegetation recovery then supported increased beaver populations, whose dam-building activities created new wetland habitats for numerous other species.
   Which choice best states the main idea of the text?
   A. Wolf reintroduction in Yellowstone National Park was controversial but ultimately successful.
   B. Trophic cascades demonstrate how predator effects can ripple through multiple ecosystem levels.
   C. Elk populations in Yellowstone decreased dramatically after wolf reintroduction.
   D. Beaver populations benefit directly from the presence of wolves in an ecosystem.

2. Dr. Anya Sharma, a climate scientist, hypothesizes that the accelerated melting of Arctic permafrost creates a dangerous feedback loop. She suggests that as permafrost thaws, it releases stored methane—a potent greenhouse gas—which then contributes to further warming and more permafrost melting. This process could potentially push climate change past critical tipping points that would be difficult to reverse.
   Which finding, if true, would most strongly support Dr. Sharma's hypothesis?
   A. Satellite data shows that methane concentrations in the Arctic atmosphere have increased by 30% over the past decade, coinciding with record permafrost thaw.
   B. Arctic permafrost contains approximately 1,400 gigatons of organic carbon, twice as much as currently in the atmosphere.
   C. Some Arctic plant species are expanding northward as temperatures warm, potentially storing additional carbon.
   D. Historical records indicate that methane levels were higher during previous interglacial periods.

3. Archaeologist Professor Kenji Tanaka argues that the construction of monumental architecture in ancient societies served primarily as a means of social integration rather than simply demonstrating elite power. He points to evidence from Neolithic sites where massive structures like Stonehenge and Göbekli Tepe required cooperative labor from dispersed communities, suggesting they functioned as centers for ritual gatherings that reinforced collective identity.
   Which finding, if true, would most directly support Professor Tanaka's argument?
   A. Analysis of animal bones at these sites shows they came from widely separated geographic regions, indicating participation from distant groups.
   B. The construction techniques used at these sites became increasingly sophisticated over time.
   C. Later monumental structures in the same regions were significantly larger and more elaborate.
   D. Geological analysis reveals that the stones were transported using advanced engineering methods.

4. **Table: Global Renewable Energy Capacity (Gigawatts)**

Energy Source	2010	2020	Growth
Solar PV	40	760	1,800%
Wind	180	730	306%
Hydropower	1,050	1,330	27%
Bioenergy	65	145	123%
Geothermal	11	14	27%

The International Energy Agency tracks the growth of renewable energy capacity worldwide. The table shows installed capacity for major renewable energy sources in 2010 and 2020.
Which choice most effectively uses data from the table to complete the text?

A. Solar PV capacity grew by 1,800% between 2010 and 2020, far exceeding the growth rates of other renewable sources.
B. Wind energy capacity increased from 180 gigawatts to 730 gigawatts, representing 306% growth over the decade.
C. Hydropower remained the largest source of renewable energy in 2020 despite having the lowest growth rate at 27%.
D. Bioenergy and geothermal energy showed moderate growth compared to solar and wind power.

5. When researchers examined the gut microbiomes of urban versus rural populations, they found striking differences. Urban residents showed significantly less diverse microbial communities, with particular depletion of bacteria known to support immune system function. These differences persisted even when controlling for diet, suggesting that other aspects of modern urban environments—such as reduced exposure to soil microorganisms and increased antibiotic use—might be driving these changes.
Based on the text, what can reasonably be inferred about the relationship between modern environments and human health?

A. Urban living may have unintended consequences for human microbiomes that could affect immune function.
B. Dietary choices completely determine the composition of an individual's gut microbiome.
C. Rural populations have healthier lifestyles than urban populations in all respects.
D. Antibiotic use is the primary factor responsible for microbiome differences between populations.

6. Analysis of ice cores from Antarctica has revealed that atmospheric carbon dioxide levels have oscillated between approximately 180 and 300 parts per million for the past 800,000 years. Since the Industrial Revolution, however, CO_2 concentrations have risen dramatically, exceeding 420 ppm in 2023. Current levels are unprecedented in the entire 800,000-year record, and the rate of increase is roughly 100 times faster than any natural change observed in the ice core data.
Which conclusion is most strongly supported by the text?

A. The current increase in atmospheric CO_2 is unprecedented in both magnitude and rate of change compared to natural variations.
B. Natural CO_2 cycles have ceased completely since the Industrial Revolution began.
C. Ice core data cannot provide reliable information about atmospheric conditions beyond 800,000 years ago.
D. CO_2 levels were stable throughout human history until the 19th century.

0 8 2 1 7 0 2 7 6 0 7 6

7. The discovery of microscopic plastic particles in remote mountain lakes and deep ocean trenches indicates that plastic pollution has become pervasive throughout Earth's ecosystems. These microplastics can enter food webs and accumulate in living organisms, with unknown long-term consequences. Their presence in such isolated environments suggests that atmospheric transport and ocean currents distribute plastic particles globally, making containment extremely challenging.
   Based on the text, what can reasonably be inferred about microplastic pollution?
   A. It represents a global environmental challenge that cannot be addressed through local solutions alone.
   B. Microplastics only affect marine ecosystems and have minimal impact on terrestrial environments.
   C. The long-term effects of microplastic accumulation are well understood by scientists.
   D. Atmospheric transport is the primary mechanism for microplastic distribution worldwide.

8. The researcher's analysis of the historical documents was remarkably _____; she identified subtle patterns in the correspondence that previous scholars had overlooked, revealing new insights into the political alliances of the period.
   Which choice completes the text with the most logical and precise word or phrase?
   A. superficial
   B. perceptive
   C. derivative
   D. ambiguous

9. The negotiations between the two countries reached an _____ when neither side would compromise on the key issues, leading to a temporary suspension of talks until new diplomatic approaches could be developed.
   Which choice completes the text with the most logical and precise word or phrase?
   A. accord
   B. impasse
   C. understanding
   D. agreement

10. The architect's design for the community center was praised for its _____ approach, seamlessly integrating accessibility features without making them appear as afterthoughts or compromising the building's aesthetic appeal.
    Which choice completes the text with the most logical and precise word or phrase?
    A. inclusive
    B. exclusionary
    C. ornamental
    D. conventional

11. While many people view mathematics as a fixed body of knowledge, mathematical historian Dr. Elena Rodriguez argues that it should be understood as a dynamic, culturally influenced human activity. She points to how different mathematical traditions developed independently in ancient Mesopotamia, China, and Mesoamerica, each with distinct approaches to problem-solving and notation. These diverse mathematical systems reflected the specific practical needs and philosophical outlooks of their respective cultures.
    Which choice best states the main purpose of the text?
    A. It argues that mathematics is not a universal language but rather a collection of culturally specific practices.
    B. It compares the practical applications of mathematics in different ancient civilizations.
    C. It explains why Mesopotamian mathematics was more advanced than other ancient mathematical traditions.
    D. It describes the specific notation systems used in various ancient mathematical traditions.

0 8 2 1 7 0 2 7 6 0 7 6

12. The following text is from Rachel Carson's 1962 book *Silent Spring*.
"These sprays, dusts, and aerosols are now applied almost universally to farms, gardens, forests, and homes—nonselective chemicals that have the power to kill every insect, the 'good' and the 'bad,' to still the song of birds and the leaping of fish in the streams, to coat the leaves with a deadly film, and to linger on in soil—all this though the intended target may be only a few weeds or insects."
Which choice best describes the function of the underlined portion in the text as a whole?
A. It emphasizes the broad, indiscriminate impact of pesticides beyond their intended targets.
B. It provides specific technical details about how different pesticides are applied.
C. It argues that pesticides should only be used in agricultural settings, not in homes or forests.
D. It explains why certain insects are classified as "good" while others are "bad."

13. Many assume that the transition from hunter-gatherer societies to agricultural ones represented unambiguous progress for humanity. However, archaeological evidence reveals a more complex picture. Early farmers often experienced poorer nutrition, increased infectious disease, and shorter lifespans compared to their hunter-gatherer contemporaries. While agriculture enabled population growth and the development of cities, these benefits came at significant costs to individual health and well-being that persisted for generations.
Which choice best states the main purpose of the text?
A. It presents evidence that complicates the narrative of agricultural transition as purely beneficial.
B. It argues that hunter-gatherer societies were superior to agricultural societies in all respects.
C. It explains why infectious diseases became more common in early agricultural communities.
D. It describes the archaeological methods used to study ancient nutrition and health.

14. **Text 1:** Proponents of "rewilding" advocate for restoring ecosystems to their pre-human intervention states by reintroducing apex predators and other keystone species. They argue that these species play crucial roles in maintaining ecosystem balance that cannot be replicated through human management alone. Rewilding projects in Europe and North America have shown promising results in restoring natural processes and increasing biodiversity.
Text 2: A 2022 study of wolf reintroduction in Colorado documented significant ecological changes within three years. Willow and cottonwood regeneration increased by 40% in areas with wolf activity, as reduced elk browsing allowed young trees to survive. Beaver colonies subsequently expanded, creating new wetland habitats that supported additional species. The researchers concluded that predator restoration can rapidly trigger cascading ecological benefits.
Based on the texts, how would the researchers of the Colorado study (Text 2) most likely describe the rewilding approach presented in Text 1?
A. It is theoretically appealing but lacks empirical support from real-world case studies.
B. It represents an effective conservation strategy that their research appears to validate.
C. It overstates the potential benefits of predator reintroduction for ecosystem restoration.
D. It fails to account for the social and economic impacts of large carnivore restoration.

15. **Text 1:** Art historians traditionally categorized Caravaggio's dramatic, naturalistic style as a radical break from the idealized mannerism of his predecessors. His use of ordinary models and stark chiaroscuro was seen as revolutionary, fundamentally altering the course of European painting. This interpretation emphasized Caravaggio's originality and positioned him as a singular genius who transformed artistic conventions almost single-handedly.
Text 2: Recent scholarship has revealed that many of Caravaggio's supposed innovations actually had precedents in earlier northern Italian art. Artists like Lorenzo Lotto and Giovanni Girolamo Savoldo had already experimented with naturalistic depiction and dramatic lighting effects. While Caravaggio developed these approaches with unprecedented intensity, recognizing these antecedents provides a more nuanced understanding of his artistic development within existing traditions.

0 8 2 1 7 0 2 7 6 0 7 6

Dokumen ini bersifat RAHASIA DAN MILIK INTELEKTUAL LENTERAGO.
Segala bentuk reproduksi atau distribusi tanpa izin tertulis dapat ditindak sesuai hukum yang berlaku.

Based on the texts, how would the recent scholars (Text 2) most likely respond to the traditional interpretation described in Text 1?

A. They would agree that Caravaggio's style represented a complete break from all previous artistic traditions.
B. They would argue that Caravaggio's innovations were more evolutionary than revolutionary, building on existing practices.
C. They would contend that Caravaggio's artistic contributions have been significantly overstated by art historians.
D. They would acknowledge that Caravaggio's use of ordinary models was completely unprecedented in European art.

16. **Notes:**
- Katherine Johnson was a mathematician at NASA.
- She calculated trajectories for the Mercury and Apollo missions.
- Her calculations were essential for John Glenn's 1962 orbital flight.
- Johnson verified computer calculations for the Apollo 11 moon landing.
- She received the Presidential Medal of Freedom in 2015.
- The 2016 film *Hidden Figures* brought her story to wider attention.

The student wants to emphasize Johnson's crucial role in early American spaceflight. Which choice most effectively uses relevant information from the notes to accomplish this goal?

A. Katherine Johnson, who received the Presidential Medal of Freedom in 2015, was featured in the film *Hidden Figures* about NASA's early years.
B. Katherine Johnson's mathematical calculations were essential to John Glenn's orbital flight and the Apollo 11 moon landing.
C. As a NASA mathematician, Katherine Johnson verified computer calculations for important space missions including Apollo 11.
D. Katherine Johnson worked at NASA during the Mercury and Apollo programs, calculating trajectories for space missions.

17. **Notes:**
- The Rosetta Stone was discovered in 1799 during Napoleon's Egyptian campaign.
- It contains the same text in three scripts: Greek, Demotic, and Hieroglyphic.
- Thomas Young and Jean-François Champollion used it to decipher Egyptian hieroglyphs.
- The stone provided the key to understanding ancient Egyptian language and culture.
- It has been housed in the British Museum since 1802.
- The decipherment opened up 3,000 years of Egyptian history to modern scholars.

The student wants to highlight the Rosetta Stone's significance for understanding ancient Egypt. Which choice most effectively uses relevant information from the notes to accomplish this goal?

A. The Rosetta Stone, discovered in 1799 and now in the British Museum, provided the key to deciphering hieroglyphs and understanding ancient Egyptian civilization.
B. Thomas Young and Jean-François Champollion used the Rosetta Stone to decipher Egyptian hieroglyphs after its discovery during Napoleon's campaign.
C. The Rosetta Stone contains the same text in Greek, Demotic, and Hieroglyphic scripts, enabling the decipherment of ancient Egyptian writing.
D. Found in 1799, the Rosetta Stone allowed scholars to read hieroglyphs for the first time, revealing 3,000 years of Egyptian history.

18. **Notes:**
- The Great Pacific Garbage Patch is a massive collection of marine debris.
- It consists mainly of plastic particles suspended in the ocean water.
- The patch is estimated to cover 1.6 million square kilometers.
- Ocean currents concentrate the debris in the North Pacific Gyre.
- Most plastic comes from land-based sources rather than ships.
- The debris harms marine life through entanglement and ingestion.

0 8 2 1 7 0 2 7 6 0 7 6

Dokumen ini bersifat RAHASIA DAN MILIK INTELEKTUAL LENTERAGO.
Segala bentuk reproduksi atau distribusi tanpa izin tertulis dapat ditindak sesuai hukum yang berlaku.

The student wants to explain the formation and environmental impact of the Great Pacific Garbage Patch. Which choice most effectively uses relevant information from the notes to accomplish this goal?

A. The Great Pacific Garbage Patch covers 1.6 million square kilometers and consists mainly of plastic debris that harms marine life.
B. Ocean currents concentrate plastic debris from land-based sources in the North Pacific Gyre, forming the Great Pacific Garbage Patch that harms marine ecosystems.
C. Marine debris in the Great Pacific Garbage Patch comes mainly from land and is concentrated by ocean currents in a massive area of the Pacific.
D. The Great Pacific Garbage Patch contains plastic particles that endanger marine animals through entanglement and ingestion in their habitat.

19. The research team had expected to find minimal microbial life in the hyper-arid core of the Atacama Desert; _____, their soil samples revealed diverse bacterial communities adapted to extreme dryness.
Which choice completes the text with the most logical transition?
A. however,
B. therefore,
C. moreover,
D. consequently,

20. Ancient Roman engineers developed remarkably sophisticated concrete formulations. _____, they incorporated volcanic ash to create a material that actually strengthens when exposed to seawater, unlike modern concrete which deteriorates rapidly in marine environments.
Which choice completes the text with the most logical transition?
A. For example,
B. Nevertheless,
C. Accordingly,
D. Similarly,

21. The composer's early string quartets adhered strictly to classical forms and harmonic conventions; _____, her later chamber works abandoned traditional structures in favor of experimental textures and extended techniques.
Which choice completes the text with the most logical transition?
A. in contrast,
B. as a result,
C. additionally,
D. namely,

22. The archaeological evidence suggests that the ancient city maintained extensive trade networks. _____, artifacts found at the site include precious stones from Afghanistan, ivory from Africa, and pottery styles from distant Mediterranean cultures.
Which choice completes the text with the most logical transition?
A. For instance,
B. However,
C. Therefore,
D. Meanwhile,

23. The research team worked _____ for over three years to sequence the ancient DNA, using advanced techniques to extract genetic material from poorly preserved specimens.
Which choice completes the text so that it conforms to the conventions of Standard English?
A. meticulously
B. meticulously,
C. meticulously;

0 8 2 1 7 0 2 7 6 0 7 6

Dokumen ini bersifat RAHASIA DAN MILIK INTELEKTUAL LENTERAGO.
Segala bentuk reproduksi atau distribusi tanpa izin tertulis dapat ditindak sesuai hukum yang berlaku.

D. meticulously:

24. The archaeological discovery _____ which included perfectly preserved wooden tools and textile fragments, has revolutionized our understanding of Neolithic technology.
Which choice completes the text so that it conforms to the conventions of Standard English?
A. which included perfectly preserved wooden tools and textile fragments has
B. which included perfectly preserved wooden tools and textile fragments, has
C. which included perfectly preserved wooden tools and textile fragments; has
D. which included perfectly preserved wooden tools and textile fragments—has

25. The new policy _____ according to the committee chair, will take effect next month after the final implementation details are resolved.
Which choice completes the text so that it conforms to the conventions of Standard English?
A. according to the committee chair will
B. according to the committee chair, will
C. according to the committee chair; will
D. according to the committee chair—will

26. _____ analyzing satellite imagery of coastal regions, researchers have documented significant shoreline erosion that threatens coastal communities worldwide.
Which choice completes the text so that it conforms to the conventions of Standard English?
A. By
B. Despite
C. Whereas
D. Until

27. The development of mRNA vaccine technology represents _____ traditional vaccine approaches, with potential applications far beyond infectious diseases.
Which choice completes the text so that it conforms to the conventions of Standard English?
A. a transformative advance beyond
B. transformatively advancing beyond
C. having transformatively advanced beyond
D. to transformatively advance beyond

0 8 2 1 7 0 2 7 6 0 7 6

Dokumen ini bersifat RAHASIA DAN MILIK INTELEKTUAL LENTERAGO.

MODULE 2: Reading and Writing (27 Questions)

Directions:

The questions in this section address a number of important reading and writing skills. Each question includes one or more passages, which may include a table or graph. Read each passage and question carefully, and then choose the best answer to the question based on the passage(s).

All questions in this section are multiple-choice with four answer choices. Each question has a single best answer.

28. Mycorrhizal networks, often called the "Wood Wide Web," represent a sophisticated underground communication system between trees and fungi. Through these symbiotic relationships, trees can share nutrients, water, and even warning signals about pest attacks. Older "mother trees" play a particularly crucial role, redistribing resources to support younger seedlings and helping maintain forest health across generations. This interconnectedness challenges traditional views of trees as isolated competitors.
    Which choice best states the main idea of the text?
    A. Trees compete fiercely for resources in forest ecosystems through underground networks.
    B. Mycorrhizal networks enable complex inter-tree communication and resource sharing that benefits entire forests.
    C. Older trees dominate forest ecosystems by controlling resource distribution to younger trees.
    D. Fungal networks primarily serve to warn trees about potential pest infestations.

29. The development of CRISPR-Cas9 gene editing technology has revolutionized genetic research by providing a precise, efficient, and relatively simple method for modifying DNA sequences. Derived from a bacterial immune system, this technology uses guide RNA to direct the Cas9 enzyme to specific genomic locations, where it can cut DNA and enable targeted changes. Applications range from correcting genetic disorders to developing disease-resistant crops, though ethical considerations remain important.
    According to the text, what is the primary function of the guide RNA in CRISPR-Cas9 technology?
    A. To cut DNA at specific locations in the genome
    B. To direct the Cas9 enzyme to target DNA sequences
    C. To repair DNA damage caused by the editing process
    D. To provide immune protection against bacterial infections

30. Dr. Maria Santos, an astrophysicist, hypothesizes that certain types of fast radio bursts (FRBs) originate from magnetars—highly magnetized neutron stars. She suggests that the enormous magnetic fields around these stars can produce intense bursts of radio energy when the star's crust undergoes sudden rearrangements, called "starquakes." This would explain why some FRBs show repeating patterns and come from regions with known magnetar activity.
    Which finding, if true, would most strongly support Dr. Santos's hypothesis?
    A. Observations detect simultaneous X-ray and radio bursts from a known magnetar in our galaxy, with properties matching distant FRBs.
    B. The distribution of FRB sources in the universe appears random, with no concentration in specific galactic regions.
    C. Computer simulations show that black hole mergers could produce radio bursts with characteristics similar to FRBs.
    D. The energy output of most FRBs exceeds what current models predict neutron stars can produce.

0 8 2 1 7 0 2 7 6 0 7 6

Dokumen ini bersifat RAHASIA DAN MILIK INTELEKTUAL LENTERAGO.
Segala bentuk reproduksi atau distribusi tanpa izin tertulis dapat ditindak sesuai hukum yang berlaku.

31. Cultural anthropologist Dr. James Okoro argues that the development of complex storytelling in early human societies served primarily as a mechanism for transmitting practical survival knowledge rather than mere entertainment. He points to indigenous oral traditions where detailed information about animal behavior, plant properties, and navigation techniques are embedded in narrative structures, making this essential knowledge more memorable and transmissible across generations.
Which finding, if true, would most directly support Dr. Okoro's argument?
A. Analysis of surviving hunter-gatherer stories shows they contain accurate ecological information that correlates with scientific data.
B. The most popular stories in oral traditions typically feature supernatural elements and heroic figures.
C. Modern educational methods that use storytelling show improved information retention compared to rote memorization.
D. Archaeological evidence suggests early humans gathered around fires primarily for warmth and protection.

32. **Table: Global Internet Usage Statistics (2023)**

Region	Internet Penetration (%)	Average Daily Usage (hours)	Mobile-First Users (%)
North America	93	6.5	72
Europe	88	5.2	68
Asia	59	5.8	83
Africa	43	6.1	89
South America	78	8.3	79
Oceania	87	5.5	74

A digital technology research firm analyzed global internet usage patterns across different regions. The table shows key metrics including internet penetration rates, average daily usage, and the percentage of users who primarily access the internet via mobile devices.
Which choice most effectively uses data from the table to complete the text?
A. South America has the highest average daily internet usage at 8.3 hours, despite having lower penetration than North America and Europe.
B. Africa has the lowest internet penetration at 43%, but those who are connected use the internet for 6.1 hours daily.
C. Asia has moderate internet penetration at 59%, but leads in mobile-first usage with 83% of users primarily accessing via mobile devices.
D. North America has the highest internet penetration at 93%, with users averaging 6.5 hours of daily usage.

33. **Table: Student Performance by Study Method**

Study Method	Average Test Score	Consistency Rating (1-10)	Long-Term Retention (%)
Practice Testing	87	9	75
Distributed Practice	82	8	80
Elaborative Interrogation	79	7	70
Highlighting	65	4	45
Rereading	68	5	50

An educational psychology study compared the effectiveness of different study methods across 500 university students. Researchers measured performance on standardized tests, consistency of results, and long-term information retention.

0 8 2 1 7 0 2 7 6 0 7 6

Dokumen ini bersifat RAHASIA DAN MILIK INTELEKTUAL LENTERAGO.
Segala bentuk reproduksi atau distribusi tanpa izin tertulis dapat ditindak sesuai hukum yang berlaku.

Which choice most effectively uses data from the table to complete the text?

A. Practice testing yielded the highest average test scores at 87, while highlighting produced the lowest at 65.
B. Distributed practice showed the best long-term retention at 80%, outperforming practice testing which scored 75%.
C. Elaborative interrogation achieved moderate results with a score of 79, but had lower consistency than distributed practice.
D. Rereading and highlighting both showed poor performance compared to more active study methods.

34. Analysis of sediment cores from lake beds across North America reveals a dramatic increase in microplastic accumulation beginning in the 1950s. The timing coincides with the rapid expansion of plastic production following World War II. Even remote, protected lakes show this pattern, indicating that microplastic pollution has become widespread through atmospheric transport and watershed connections. The accumulation rate has accelerated since the 1990s, mirroring global plastic production trends.
Based on the text, what can reasonably be inferred about microplastic pollution?
A. It represents a persistent environmental issue that correlates with industrial plastic production and cannot be contained locally.
B. Microplastics only became a significant problem after the 1990s due to increased plastic consumption.
C. Remote lakes are protected from microplastic contamination because of their isolation from human activity.
D. The primary source of microplastics in lakes is direct dumping of plastic waste rather than atmospheric transport.

35. The researcher's approach to the historical mystery was remarkably _____; she examined documents in multiple languages, consulted archaeological evidence, and applied statistical analysis to patterns that previous scholars had considered random coincidences.
Which choice completes the text with the most logical and precise word or phrase?
A. narrow
B. multidisciplinary
C. conventional
D. speculative

36. The peace negotiations reached a critical _____ when both parties finally acknowledged the fundamental issues underlying the conflict, creating an opportunity for genuine resolution rather than temporary compromise.
Which choice completes the text with the most logical and precise word or phrase?
A. stagnation
B. juncture
C. regression
D. diversion

37. The architect's design for the disability access center was praised for its _____ features, which integrated assistive technologies so seamlessly that they enhanced the experience for all users regardless of ability.
Which choice completes the text with the most logical and precise word or phrase?
A. segregated
B. universal
C. specialized
D. redundant

0 8 2 1 7 0 2 7 6 0 7 6

Dokumen ini bersifat RAHASIA DAN MILIK INTELEKTUAL LENTERAGO.
Segala bentuk reproduksi atau distribusi tanpa izin tertulis dapat ditindak sesuai hukum yang berlaku.

38. The mathematician's proof was celebrated for its _____ elegance; she solved a problem that had stumped experts for decades using an approach that was both innovative and surprisingly simple once understood.
Which choice completes the text with the most logical and precise word or phrase?
A. convoluted
B. paradoxical
C. austere
D. ornate

39. While traditional views of Neanderthals depicted them as primitive brutes incapable of complex thought, recent archaeological discoveries have dramatically revised this assessment. Evidence of symbolic behavior, including jewelry made from eagle talons and cave paintings potentially dating to Neanderthal occupation, suggests sophisticated cognitive abilities. Genetic analysis also reveals that modern humans outside Africa carry Neanderthal DNA, indicating interbreeding and challenging strict separation between the species.
Which choice best states the main purpose of the text?
A. It presents evidence that challenges outdated stereotypes about Neanderthal intelligence and capabilities.
B. It argues that Neanderthals were biologically identical to modern humans in all important respects.
C. It explains why early archaeologists misunderstood Neanderthal cultural achievements.
D. It describes the genetic methods used to analyze Neanderthal DNA in modern populations.

40. The following text is from Ada Lovelace's 1843 notes on Charles Babbage's Analytical Engine.
"The Analytical Engine weaves algebraic patterns just as the Jacquard loom weaves flowers and leaves. The operating mechanism can even act upon other quantities than those which are operated upon. Thus: when a pair of cards are put into the engine, it may then choose one of two courses according as a certain quantity is positive or negative."
Which choice best describes the function of the underlined sentence in the text as a whole?
A. It uses analogy to explain the relationship between the Analytical Engine's operation and a familiar technology.
B. It provides specific technical specifications for how the Analytical Engine processes mathematical operations.
C. It contrasts the capabilities of the Analytical Engine with those of earlier mechanical calculators.
D. It explains why the Jacquard loom was an important precursor to computer technology.

41. **Text 1:** Proponents of "de-extinction" argue that using genetic engineering to revive extinct species could help restore damaged ecosystems and advance conservation science. They point to potential candidates like the woolly mammoth, whose grazing habits might help convert Arctic tundra back to grassland, potentially slowing permafrost thaw. This approach, they suggest, represents a proactive form of conservation that could address biodiversity loss more aggressively than traditional methods.
Text 2: A 2023 analysis of de-extinction proposals highlighted significant ecological uncertainties. Resurrected species would be introduced into ecosystems that have evolved in their absence, creating unpredictable interactions with existing species. The resources required for de-extinction programs might also divert funding from protecting endangered species that still survive. Critics question whether these efforts address the root causes of extinction or merely create technological spectacles.
Based on the texts, how would the critics cited in Text 2 most likely respond to the de-extinction proponents in Text 1?
A. They would agree that de-extinction represents an important advancement for conservation science.

0 8 2 1 7 0 2 7 6 0 7 6

Dokumen ini bersifat RAHASIA DAN MILIK INTELEKTUAL LENTERAGO.
Segala bentuk reproduksi atau distribusi tanpa izin tertulis dapat ditindak sesuai hukum yang berlaku.

B. They would argue that de-extinction raises ecological concerns and may not address fundamental conservation challenges.
C. They would contend that woolly mammoths are the ideal candidate for initial de-extinction efforts.
D. They would acknowledge that traditional conservation methods have completely failed to protect biodiversity.

42. **Text 1:** Art historians traditionally interpreted Jackson Pollock's drip paintings as pure expressions of emotion and spontaneity, completely divorced from representational intent. This reading emphasized the artist's psychological state and the physicality of his painting process, positioning his work as the ultimate example of action painting and abstract expressionism.
Text 2: Recent analysis using mathematical algorithms has revealed complex fractal patterns in Pollock's paintings that exhibit consistent mathematical properties across different scales. These patterns, which occur naturally in phenomena like coastlines and cloud formations, suggest that Pollock's technique was more controlled and systematic than previously thought. This challenges the notion that his work was purely spontaneous and emotional.
Based on the texts, how would the recent researchers (Text 2) most likely respond to the traditional interpretation described in Text 1?
A. They would agree that Pollock's work represents pure emotional expression without underlying structure.
B. They would argue that mathematical analysis reveals underlying order and control in Pollock's apparently spontaneous technique.
C. They would contend that Pollock intentionally concealed mathematical patterns in his work to enhance its emotional impact.
D. They would acknowledge that fractal analysis cannot be meaningfully applied to artistic works.

43. **Notes:**
- The Mars Rover Curiosity landed on Mars in August 2012.
- Its mission was to determine if Mars ever had environmental conditions suitable for microbial life.
- Curiosity discovered evidence of ancient freshwater lakes and organic molecules.
- The rover analyzed Martian rocks and soil using sophisticated onboard laboratories.
- Curiosity found that ancient Mars had the right chemical ingredients and energy sources for life.
- The mission continues to operate years beyond its original two-year timeline.

The student wants to emphasize Curiosity's success in answering its primary scientific question. Which choice most effectively uses relevant information from the notes to accomplish this goal?
A. Curiosity discovered ancient freshwater lakes and organic molecules, showing that Mars once had conditions suitable for microbial life.
B. The Mars Rover Curiosity landed in 2012 and has operated far longer than its planned two-year mission duration.
C. Curiosity's sophisticated laboratories analyzed Martian rocks and soil, finding chemical ingredients needed for life.
D. Evidence of ancient lakes and organic molecules found by Curiosity suggests Mars may have once supported life.

44. **Notes:**
- The Silk Road was an ancient network of trade routes connecting East Asia with the Mediterranean.
- It facilitated exchange of goods, technologies, and ideas between civilizations.
- Silk, spices, and porcelain moved west while glassware, textiles, and metals moved east.
- Religions including Buddhism, Islam, and Christianity spread along these routes.
- The Silk Road declined after the Ottoman Empire blocked European access in 1453.

- Maritime trade routes eventually replaced overland Silk Road trade.

The student wants to highlight the Silk Road's role as a conduit for cultural and technological exchange. Which choice most effectively uses relevant information from the notes to accomplish this goal?

A. The Silk Road connected East and West for centuries, enabling exchange of goods, technologies, and religions before declining in the 15th century.
B. Silk, spices, and porcelain traveled west on the Silk Road while glassware and metals moved east between diverse civilizations.
C. The Ottoman Empire's blockage of the Silk Road in 1453 led to the development of maritime trade routes to Asia.
D. Buddhism, Islam, and Christianity all spread along the Silk Road network that connected Asia with the Mediterranean.

45. **Notes:**
- Coral bleaching occurs when corals expel their symbiotic algae due to stress.
- Elevated ocean temperatures are the primary cause of mass bleaching events.
- Bleached corals can recover if conditions improve, but prolonged stress leads to death.
- The Great Barrier Reef experienced mass bleaching in 2016, 2017, and 2020.
- Climate change is increasing the frequency and severity of bleaching events.
- Coral reefs support approximately 25% of marine biodiversity despite covering less than 1% of ocean floor.

The student wants to explain the threat that coral bleaching poses to marine ecosystems. Which choice most effectively uses relevant information from the notes to accomplish this goal?

A. Coral bleaching caused by ocean warming threatens coral reefs that support exceptional marine biodiversity despite covering small areas.
B. The Great Barrier Reef has suffered repeated mass bleaching events in recent years due to rising ocean temperatures from climate change.
C. When corals bleach from stress, they expel symbiotic algae and may die if conditions don't improve, damaging reef ecosystems.
D. Climate change causes ocean warming that triggers coral bleaching, endangering reefs and the marine life they support.

46. **Notes:**
- The Human Genome Project was an international research effort completed in 2003.
- It sequenced the entire human genome for the first time.
- The project took 13 years and cost approximately $2.7 billion.
- All data was made publicly available to accelerate scientific discovery.
- The project identified approximately 20,000-25,000 human genes.
- It revolutionized fields from medicine to anthropology and created new biotechnology industries.

The student wants to emphasize the scale and impact of the Human Genome Project. Which choice most effectively uses relevant information from the notes to accomplish this goal?

A. The Human Genome Project, completed in 2003 after 13 years and $2.7 billion, sequenced the human genome and revolutionized multiple scientific fields.
B. By identifying 20,000-25,000 human genes and making data publicly available, the Human Genome Project transformed biomedical research.
C. An international effort sequenced the human genome, creating new biotechnology industries and advancing medical research.
D. Completed in 2003, the Human Genome Project made all genetic data publicly available to accelerate scientific discoveries worldwide.

47. The research team expected to find minimal microbial diversity in the deep subsurface; _____, their core samples revealed complex communities of bacteria and archaea thriving kilometers below Earth's surface.

Which choice completes the text with the most logical transition?
A. however,
B. therefore,
C. moreover,
D. consequently,

48. The ancient city's architectural achievements were remarkably sophisticated. _____, the drainage system included covered channels, settling tanks, and even early forms of water treatment that removed impurities before water reached residential areas.
Which choice completes the text with the most logical transition?
A. For example,
B. Nevertheless,
C. Accordingly,
D. Similarly

49. The composer's early symphonies followed classical forms with traditional instrumentation; _____, her mature works incorporated electronic elements, unconventional structures, and extended techniques that challenged audience expectations.
Which choice completes the text with the most logical transition?
A. in contrast,
B. as a result,
C. additionally,
D. namely,

50. The research team worked _____ for over four years to decode the ancient manuscript, using multispectral imaging to reveal text that had faded beyond visible detection.
Which choice completes the text so that it conforms to the conventions of Standard English?
A. tirelessly
B. tirelessly,
C. tirelessly;
D. tirelessly:

51. The archaeological discovery _____ which included intact pottery and metal tools, has provided new insights into daily life in the ancient city.
Which choice completes the text so that it conforms to the conventions of Standard English?
A. which included intact pottery and metal tools has
B. which included intact pottery and metal tools, has
C. which included intact pottery and metal tools; has
D. which included intact pottery and metal tools—has

52. The new regulations _____ according to the government announcement, will be implemented in phases over the next two years to allow businesses time to adapt.
Which choice completes the text so that it conforms to the conventions of Standard English?
A. according to the government announcement will
B. according to the government announcement, will
C. according to the government announcement; will
D. according to the government announcement—will

53. The research findings _____ surprisingly, contradicted decades of established theory and opened new avenues for scientific investigation.
Which choice completes the text so that it conforms to the conventions of Standard English?
A. surprisingly
B. surprisingly,
C. surprisingly;

0 8 2 1 7 0 2 7 6 0 7 6

Dokumen ini bersifat RAHASIA DAN MILIK INTELEKTUAL LENTERAGO.
Segala bentuk reproduksi atau distribusi tanpa izin tertulis dapat ditindak sesuai hukum yang berlaku.

D. surprisingly:

54. The development of quantum computing represents _____ classical computing, with implications for cryptography, drug discovery, and complex system modeling.
Which choice completes the text so that it conforms to the conventions of Standard English?
A. a fundamental shift from
B. fundamentally shifting from
C. having fundamentally shifted from
D. to fundamentally shift from
